

Logical Framework

	Description	Objectively verifiable indicators	Verification method	Preconditions for implementation
Purpose	What is the reason for implementing the project? What should the contribution of the project be? What should happen after it is implemented?	1) Which objectively verifiable indicators will verify that the purpose has been fulfilled?	1) How will we verify indicators?	---
Objective	To describe the status of the issues at the moment the project is completed.	1) Which objectively verifiable indicators will verify that the objective has been fulfilled?	1) How will we verify indicators?	Under what assumptions will the objective truly be in line with the purpose?
Project outputs	1) Specific outputs of the project teams; what will the project team and its members specifically do and create?	1) Which objectively verifiable indicators will verify that individual outputs have been fulfilled?	1) How will we verify indicators?	Under what assumptions will the specific outputs really lead to the objectives?
		Resources	Rough time frame	
Main groups of activities	Which activities (2 to 4) will lead to each and every output?	How demanding will each and every activity be in terms of resources? Money, person-days, etc...	How long will each and every activity approximately take?	Under what assumptions will the activities lead to outputs?
The project will not address			Preliminary conditions	
What is not going to be addressed by this project (but someone might think otherwise)?			What are the preliminary conditions for the implementation of the project?
